

Data Feed Release Notes

Release Date: March 14, 2024

Data.crea enhancements

Summary

- **Timestamp Adjustments:** Timestamps, previously displayed in GMT/UTC format, will now be accurately adjusted (+4 or +5) to account for daylight saving time, when necessary, based on the date.

Examples:

- If property information is updated on January 8th at 8:26 EST, you'll see this reflected in the API response as `LastUpdated="Mon, 08 Jan 2024 13:26:00 GMT"`.
- Whereas, if property information is updated on April 8th at 8:26 EDT, you'll see this reflected in the API response as `LastUpdated="Mon, 08 April 2024 12:26:00 GMT"`.

- **Timestamps interpretation in Search Queries:** In the past, timestamps in search queries were interpreted in EST format. With the latest updates, these timestamps will now be interpreted in GMT/UTC format to align with the timestamps returned in the response payload.

Examples:

- If you initiate a search transaction for a property with the request `LastUpdated=08 Jan 2024 13:26:00` to fetch updated records since your last request, then you will receive information about properties that have been updated since January 8th at 8:26 EST.
- If you initiate a search transaction for a property with the request `LastUpdated=08 April 2024 13:26:00` to fetch updated records since your last request, then you will receive information about properties that have been updated since April 8th at 8:26 EDT.

- **Image Number Display Fix:** The system used to by default display the image number as one in the GetObject response, even when a specific image was requested. This issue has been resolved, and the system will now accurately display the number of the requested image.

Example-

- <https://data.crea.ca/Object.svc/GetObject?Resource=Property&Type=LargePhoto&ID=1268855:9&Location=1&Culture=en-CA>
- Response will not display correct Image number as per the request query -
